

Tigran Ohanyan

PDF (latest version) | github | tigranohanyan777@gmail.com | Yerevan, Armenia

Profile

Senior backend engineer with 7+ years building scalable production services in finance, banking, and travel. Strong hands-on experience in Golang and Scala, with additional work in MATLAB, Python, and Flutter. Enterprise background spans system design, migrations, CI/CD, and on-call production support. Brings enterprise engineering practices — reliability, integration, and team delivery — across languages and stacks.

Coaches junior and mid-level engineers and uses pair programming to share domain knowledge, habits, and coding practices with teammates. Applies TDD and AI-assisted development as core parts of daily delivery.

Skills

- **Languages:** Golang, Scala (AKKA, ZIO), Python, MATLAB, Dart (Flutter)
- **Cloud & DevOps:** AWS (CloudFormation, SAM, ECS), Docker, CI/CD (GitHub Actions, GitLab CI/CD)
- **Data & messaging:** PostgreSQL, DynamoDB, Neo4j, S3, Kafka, SQS, MySQL
- **Architecture:** Event-driven systems, Domain-Driven Design (DDD), Event Sourcing, API design, RAG, GraphRAG
- **Engineering practices:** TDD, pair programming, coaching/mentoring, AI-assisted development (GitHub Copilot, Cursor)

Career

Backend Engineer

DataArt Solutions Inc | *Jul 2021 – Present*

Project: Cruise Line Company (Travel Domain) **Tech used:** Scala 2/3, ZIO, AKKA, Docker, MySQL, SQS, SNS - Introduced ZIO and Scala 3 into the project and helped the team adopt the new stack through pair programming, code reviews, and hands-on work on production features.

- Migrated production services from the AKKA/Scala 2 stack to ZIO/Scala 3 once the team was ready to adopt the new stack.
- Built backend services for cruise booking and reservation management.
- Contributed to architecture for travel-domain microservices and integration with legacy third-party APIs.

Project: Banking Application **Tech used:** Scala, AKKA, ZIO, Docker, GitLab CI/CD, SQS, SNS, OracleDB, Postgres, Redis

- Built backend services for a banking application with event-driven messaging over SQS and SNS.
- Contributed to system design for scalable and high performance services.

- Designed and implemented GitLab CI/CD pipelines from scratch for build, test, and deployment.
- Owned production support: monitored live systems and resolved incidents.

Personal projects

AI assistant for Armenian legal texts | Jan 2025 – Personal project · PoC Tech used: Golang, Google ADK, Flutter, Neo4j, DynamoDB, S3, AWS ECS

- Building a multi-agent assistant over Armenian laws, resolutions, and legal codes to answer user questions from natural-language queries.
- GraphRAG on Neo4j (graph and vector storage) with multi-agent orchestration via Google ADK to find and synthesize relevant legal sources.
- Golang backend on ECS; DynamoDB for conversation state; S3 for recovery checkpoints during long-running scraping of legal documents from official government sources; Flutter frontend.

chessfinder.org | May 2023 – Personal project Tech used: Golang, Scala (Tapir, ZIO), AWS Serverless (DynamoDB, SNS, SQS, API Gateway)

- Built and maintain a free, open-source app that searches chess.com games by partial board position — a feature chess.com does not offer.
- In **Tapir**, implemented AWS API Gateway CloudFormation generation from endpoint definitions for ZIO backends.

ML Engineer

Zoomerang Inc | May 2021 – Jul 2021

Tech used: Python, TensorFlow, Scikit-learn, Pandas, NumPy, SciPy

- Built a recommender system in Python using TensorFlow and scikit-learn.
- Compared modeling approaches and tuned the pipeline for production performance.
- Extended existing ML tooling to fit product data and release requirements.

Trading Systems Engineer

SAS Group | Jul 2020 – May 2021

Tech used: Scala, AKKA, PostgreSQL, Interactive Brokers API

- Built automated trading systems in Scala integrated with the Interactive Brokers API for live market operations.
- Implemented a backtesting framework to evaluate strategies against historical data.
- Monitored and supported live trading applications in production.

Lecturer

Yerevan State University | *Aug 2019 – Jun 2021*

Tech used: MATLAB

- Taught MATLAB for building financial and economic models.
- Delivered lectures, practical sessions, and hands-on student projects.

Trading Systems Engineer, Researcher

Future Financial Technologies | *Aug 2018 – Feb 2019*

Tech used: Scala, Akka, PostgreSQL, MATLAB

- Built automated trading systems for cryptocurrency market operations.
- Ran backtesting and statistical inference to evaluate and refine trading strategies.
- Researched and implemented algorithmic strategies for crypto markets.

Education

M.Sc., Applied Economics and Mathematical Methods

Higher School of Economics, St. Petersburg | *2016 – 2018*

B.Econ., Economics

Yerevan State University | *2010 – 2016*

Spoken languages

- **Armenian:** Native
- **Russian:** Professional working proficiency
- **English:** Professional working proficiency
